

Hotel Management System

1. Executive Summary

The proposed **Hotel Management System (HMS)** is a comprehensive software solution designed to streamline and automate hotel operations including reservations, front desk management, housekeeping, billing, and reporting.

The system will centralize all hotel activities into a single platform, improving efficiency, reducing manual errors, and enhancing guest experience. It is designed to support hotels of all sizes—from boutique hotels to multi-property chains.

2. Project Objectives

- Automate hotel operations and reduce manual work
- Improve guest experience and service quality
- Centralize reservation and booking management
- Streamline billing and payment processes
- Enable real-time reporting and analytics
- Support scalability for future expansion

3. System Overview

The HMS will be a **web-based platform** with optional **mobile access**, allowing hotel staff to manage operations efficiently from any device.

The system will include **role-based access control**, ensuring secure and structured access for different departments such as front desk, housekeeping, and management.

4. Core Modules

A) Reservation & Booking Management

Features:

- Online and offline booking management
- Room availability calendar
- Real-time booking updates
- Guest reservation history

- Booking modification and cancellation
- Group booking support

B) Front Desk Management

Features:

- Guest check-in and check-out
- Room allocation and upgrades
- Walk-in guest management
- ID and document capture
- Early check-in / late check-out handling

C) Room & Inventory Management

Features:

- Room categorization (Deluxe, Standard, Suite, etc.)
- Real-time room status (Available, Occupied, Cleaning, Maintenance)
- Rate management
- Seasonal pricing support

D) Housekeeping Management

Features:

- Room cleaning schedules
- Housekeeping task assignment
- Status updates (Clean / Dirty / In Progress)
- Maintenance issue reporting

E) Billing & Invoicing

Features:

- Automated invoice generation
- Room charges & service billing
- Tax calculation
- Multiple payment methods
- Bill splitting (for group guests)

F) Payment Management

Supported Methods:

- Cash
- Card payments
- Online payments

Features:

- Secure transaction tracking
- Payment history
- Refund handling

G) Guest Management (CRM)

Features:

- Guest profile management
- Stay history tracking
- Preferences and notes
- Loyalty program support (optional)
- Communication tracking

H) Reporting & Analytics

Reports Include:

- Daily occupancy report
- Revenue reports
- Booking trends
- Room performance
- Guest insights

5. User Roles

- Super Admin
- Hotel Manager
- Front Desk Staff
- Housekeeping Staff
- Accountant

- Guest (limited access for booking)

Each role will have defined permissions.

6. Technology Stack

Backend:

- PHP

Frontend:

- HTML, CSS, JavaScript

Mobile Application:

- React Native

Database:

- MySQL

Hosting:

- Cloud / VPS / Dedicated Server

7. Key Features Summary

- Real-time room availability
- Centralized booking system
- Automated billing
- Housekeeping tracking
- CRM for guest management
- Multi-user access control
- Scalable architecture

8. Security Features

- Secure login & authentication
- Role-based access control
- Data encryption

- Activity logs
- Backup & recovery system

9. Post-Launch Support

- Bug fixing and maintenance
- Performance optimization
- Feature enhancements
- Technical support

10. Benefits of the System

- Improved operational efficiency
- Better guest experience
- Reduced manual errors
- Faster check-in/check-out
- Real-time business insights
- Increased revenue opportunities

11. Conclusion

The proposed **Hotel Management System** is a powerful, scalable, and user-friendly solution that enables hotels to efficiently manage their daily operations while enhancing guest satisfaction.

With centralized control, automation, and real-time insights, the system will support long-term growth and operational excellence.
